

100% POLYESTER ON A TRANSPARENT CARRIER.

The material is easily reversible so that it can be positioned on the textile for later re-embroidery without the need for any additional aids. The specially developed PSA2 Needle Glide™ adhesive allows a motif to be positioned on the textile without sticking the needles or causing thread breakage during the embroidery process. 100% polyester on a transparent backing and therefore ideal for plotting.

ATTENTION: To avoid fraying of the fabric during washing, the edges must be sealed, either by overprinting with another CAD-CUT® material or by embroidering around them.
